

thank you

limitless

The Wearality Sky™ glasses you now own are the result of five years and millions of dollars of research in optics, HMDs, and human factors. They look simple, but that is part of their magic. You have the widest field of view, greatest edge-to-edge sharpness, least chromatic aberration, and largest exit pupil of any VR system. Most people enjoy them without glasses or adjustment. You can share powerfully immersive movie and video experiences, sporting events, concerts, and games, simply by passing your Sky™ and phone to others. The possibilities are endless.

Our team is proud to be advancing VR technology, and we honor your backing in making it possible.

Michael T. Jones, CEO,
on behalf of the entire Wearality team

wearality 

who we are

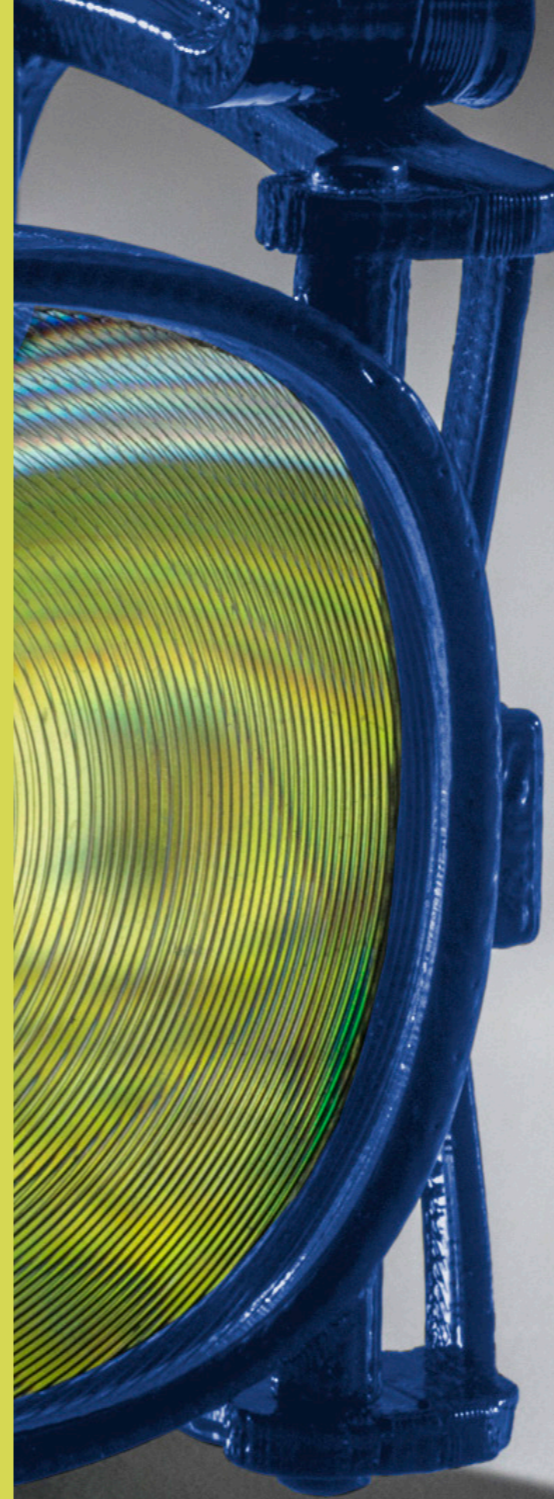

We spent the past five years developing optics technology at Lockheed Martin for the aerospace and defense industries. After securing an exclusive license to this patented technology, we left our lab, created our own company, and committed ourselves to bringing our unprecedented immersive capability to millions of users. Our first product, the Wearality Sky™, creates a true cinematic experience for movies and videos. It lets you explore and share immersive content effortlessly, making it indispensable for smartphone users everywhere. By providing our lenses to head mount manufacturers in the virtual reality industry, our innovation benefits all users. The optics you see, and technologies in development, will make immersive content mainstream, transforming the way people explore, share, and create visual media.

Wearality is headquartered in Los Altos, California, with a primary research center in Orlando, Florida.

our mission

We are *the reality in virtual reality*, delivering delightfully wide FOV display technology for comfortable, natural visual experiences. Our unique optical advances are available in the affordable Wearality Sky™ for smartphone users, and as superior lenses in the HMDs of others. We believe that this natural view will cause a renaissance in VR by attracting millions of casual users never before interested, elevating the standard of realness that users expect, and growing the demand for immersive content. Providing the best optics in the world, now and for the foreseeable future, is our part in making immersive visualization ubiquitous.

using your glasses

For all information related to using your new Wearality Sky™ glasses, visit our website or scan the QR code below.

for your safety

The Wearality Sky™ offers a truly immersive experience through the utilization of powerful, precision optics. Therefore, when using please:

- Do not look directly into the Sun (good advice at any time).
- Do not leave exposed to direct sunlight (like any magnifying lens, this can cause a fire).
- Use only in a safe environment that is clear of people and obstacles.
- Do not leave children/stove/etc. unsupervised during use.
- Not for use by children under the age of 13 without supervision.
- Take frequent breaks, even if you don't think you need one.
- If you experience discomfort, stop using device immediately.
- Do not drive or engage in other high-consequence activities until you have fully recovered from any symptoms you experienced.
- See a doctor if you have serious or persistent symptoms.
